

Who Studies What?

Draw an arrow to match the scientist to their area of study.

THESE SCIENTISTS...
Archaeologists
Astronomers
Atmospheric scientist
Biologist
Ecologist
Environmental scientist
Geologist
Glaciologist
Paleontologist
Seismologists

STUDY...
the earth's materials like rocks and minerals
relationships between organisms and their environment
life and living organisms
the Earth's atmosphere and the processes that happen inside it
glaciers, ice and natural phenomena that involve ice
dinosaurs
everything related to earthquakes
the health of the environment, including things such as air quality, water quality, soil quality etc.
the remains of human life
the solar system, outer space and the objects in it

Within each category of scientists, there are actually many more types of scientists, for example, here are some different types of biologists:

THESE BIOLOGISTS...	STUDY...
Botanists	plants
Zoologists	animals and their behavior
Microbiologists	microorganisms
Marine biologists	organisms that live in the ocean
Entomologists	insects
Herpetologists	reptiles and amphibians
Mycologists	fungi
Ornithologists	birds

Which one interests you the most and why?
